2009 HTML5

HTML stands for Hyper Text Markup Language.

HTML is a markup language and it is a set of markup tags.

HTML markup tags are called HTML tags.

HTML tags are keywords surrounded by angle brackets: <html>

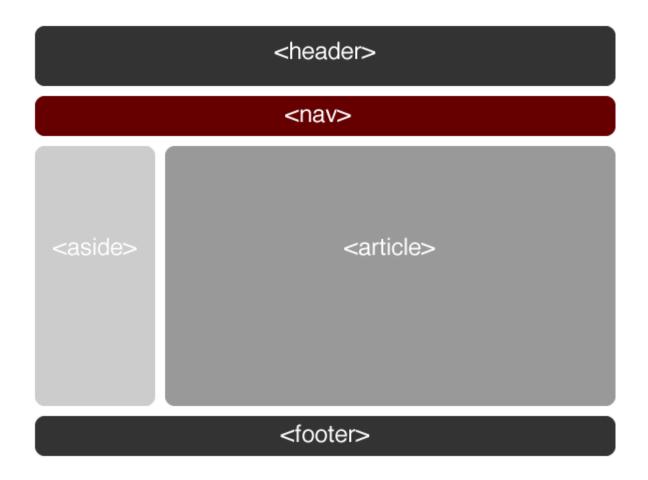

It should have one start and end tag. <html></html>

To edit the HTML, NOTEPAD is enough.

We save an HTML file, either the .htm or the .html file extension.

HTML Document Structure

Section document

HTML5 •

Exercise

Create a html page using the HTML5 structure.

Use: header, nav, article, section and footer. This page will be used t show a list of hotels.

Tags & Elements

HTML element is defined by a starting tag. If the element contains other content, it ends with a closing tag.

```
<h1> is a tag but <h1>This is a heading</h1>
```

Attributes

HTML elements can have attributes that provide additional information about an element.

.

Are always specified in the start tag like: name="value"

Links

A hyperlink is a text or an image you can click on, and jump to another document.

Are defined with the tag <a>

```
<a href="http://www.html.net/">Here is a link </a>
```

Using the **target** attribute we can specify where to open the linked page/document

Images

 tag is empty, it contains attributes only, and does not have a closing tag.

<img src="images/logo.png" alt="The icon cannot be
displayed"/>

Lists

Unordered

```
CoffeeTeaMilk
```

- Coffee
- Tea
- Milk

Ordered

```
     <!i>Coffee
     <!i>Tea
     <!i>Milk
```

- 1. Coffee
- 2. Tea
- 3. Milk

Div vs Span

span element is in-line div element is block-line

Tables

```
        Header1
        Header2
        Header2
```

Exercise

Create a table to display a list of hotels. The table will have the following columns: name, address, city, site, rooms, stars.

Forms

```
<form method="POST/GET" action="serverUrl">
<label for="name">Name</label>
<input type="text" id="name" maxlength="20" required autofocus/>
<label for="name">Address</label>
<input type="text" id="address" required />
<label for="name">Email</label>
<input type="email" id="email"/>
<label for="age">Age</label>
<input type="number" id="age" min="5" max="50" />
<input type="submit">
</form>
```

Exercise

Create a page to add a hotel with fields: name, address, city, email, phone, site, rooms no, stars no. Page structure will be similar to the one created to display the list of hotels. Use HTML5 input types and validations.

Questions?

Exercise

Add to hotel list page two more sections:

- Search hotel form: city, check-in and data check-out date;
- "Last minute deals" with: hotel name, hotel picture and discount;

Add to aside a list with links in order to browse the 3 sections.

Add navigation menu to add hotel page.

CSS3

What is CSS?

- CSS stands for Cascading Style Sheets
- CSS defines how HTML elements are to be displayed
- 3 types: Internal, External and Inline

How to add CSS

Inline

```
<h1 style="color:red;margin-left:40px;">This is a heading.</h1>
```

Internal Style Sheet

External Style Sheet

```
<head>
  type="text/css" href="style.css">
</head>
```

Element selector

```
 First paragraph Another paragraph
```

```
p{
    font-size: 15px;
    color:red;
}
```

Class selector

```
<h1 class="parag">Selectors exemple</h1>
 Third paragraph
```

```
.parag{
     color: green;
}
```

Id selector

```
First paragraph
 Colored paragraph
#colorParag{
      color:blue;
}
```

Grouping Selectors

```
h1{
    font-style: italic;
}
h2{
    font-style: italic;
}
p{
    font-style: italic;
}
```

```
h1, h2, p{
    font-style: italic;
}
```

Nested Tags

descendant selector

adjacent sibling selector

general sibling selector

child selector

```
div p {
    background-color: yellow;
}

div > p {
    background-color: yellow;
}

div + p {
    background-color: yellow;
}

div ~ p {
    background-color: yellow;
}
```

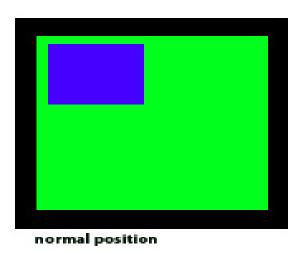

Pseudo Classes

A pseudo-class is used to define a special state of an element

```
/* unvisited link */
a:link {
                                           p:first-child {
    color: #FF0000;
                                               color: blue:
}
/* visited link */
a:visited {
    color: #00FF00;
}
/* mouse over link */
a:hover {
    color: #FF00FF;
/* selected link */
a:active {
    color: #0000FF;
```

Static Positioning

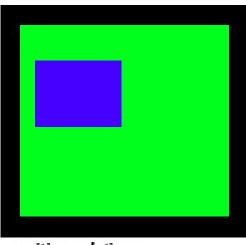

Elements are positioned static by default. A static positioned element is always positioned according to the normal flow of the page.

Relative Positioning

A relative positioned element is positioned relative to its normal position

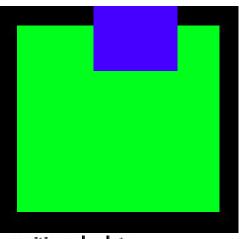

position: relative;

position: relative; top: 20px;

Absolute Positioning

position: absolute;

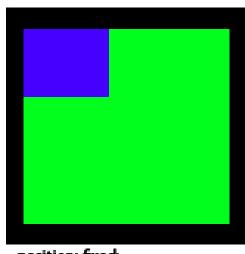

position: absolute; left: 200px;

Fixed Positioning

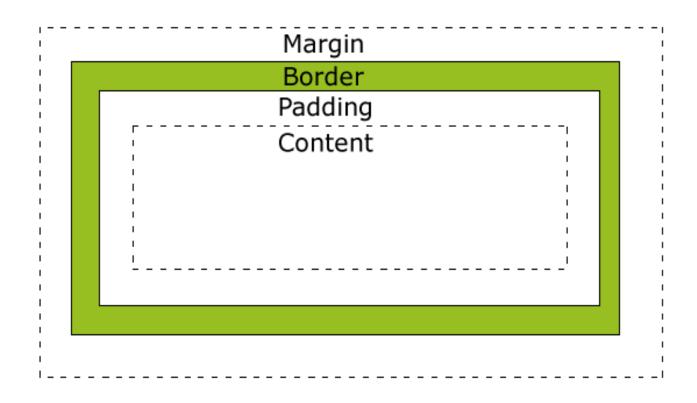

Element is positioned relative to the browser window, and will not move even if the window is scrolled.

position: fixed;

position: fixed; left: 20px; top: 20px;

Box Model

Questions?

Exercise

Apply CSS to hotel list page and add hotel page.

BOOTSTRAP

What is Boostrap?

Open Source Framework for Building Web Sites

A bit of CSS

A bit of JavaScript

Modular

Covers the 80% of the Metaphors

Get Bootstrap

http://getbootstrap.com/

Bootstrap Grid System

Bootstrap uses rows and columns for creating page layouts(Grid system)

Content should be placed within columns, and only columns may be immediate children of rows.

Grid system

.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1	.col- md-1
.col-md-8							.col-md-4				
.col-md-4 .col-md-4							.col-md-4				
.col-md-6					.col-md-6						

Grid options

	Extra small devices Phones (<768px)	Small devices Tablets (≥768px)	Medium devices Desktops (≥992px)	Large devices Desktops (≥1200px)			
Grid behavior	Horizontal at all times	Collapsed to start, horizontal above breakpoints					
Container width	None (auto)	750px	970px	1170px			
Class prefix	.col-xs-	.col-sm-	.col-md-	.col-lg-			
# of columns	12						
Column width	Auto	~62px	~81px	~97px			
Gutter width	30px (15px on each side of a column)						
Nestable	Yes						
Offsets	Yes						
Column ordering	Yes						

Column

Max 12 col per row

Offsetting columns

.col-md-offset-*

Column ordering

.col-md-push-*

.col-md-pull-*

Tables

Basic table

.table

Striped rows

.table-striped

Bordered table

.table-bordered

Hover rows

.table-hover

Condensed table

.table-condensed

Forms

Wrap labels and controls

.form-group

.form-control

Inline form

.form-inline

Questions?

Exercise

Add bootstrap to hotel list page and add hotel page. Use bootstrap classes to align and style the pages.

Thank you!
